Selection of Hardware

ARDWARE is a necessary part of the equipment of every building. No single detail of architecture is of more importance; nothing in the building gets so much use. It attracts the eye strongly because in color and material it furnishes the element of contrast, making harmony very essential; its constant use and prominence emphasize the importance of care in its selection.

This book illustrates various designs of SARGENT Artistic Hardware and is a practical guide to the selection of suitable hardware trimmings.

Sargent Hardware

SARGENT Hardware contributes to the permanent worth of any building. The beauty and artistic quality of the designs illustrated in this book are apparent; they are on the surface to be seen by everyone. Underneath are fine materials and thorough workmanship that are appreciated by experienced architects and expert mechanics.

Easy Spring Locks

This careful workmanship is peculiarly valuable in SARGENT Easy Spring Locks—the finest development of correct lock principles. Every part is accurately fitted to operate smoothly, easily, quietly and without friction, eliminating repair bills and assuring long years of satisfactory service. The SARGENT Easy Spring enables the latch bolt to work very freely so that the door does not have to be slammed nor stand ajar, but latches gently as it is closed; this is accomplished by using good, stiff, spiral springs so arranged as to produce the desirable combination of

*Easy on the Latch Bolt,
Firm on the Knob.*

The Front Door

The front door is considered first when hardware is being chosen because this is the most important entrance to the building and its central architectural feature; it is the place where friends are welcomed and receive their first impressions, where members of the family go in and out. Because of its prominence the front door especially requires hardware trimmings that harmonize in design with the style of architecture and are in right proportions to the door. This and all other doors admitting from the outside to the interior of the house should be safeguarded by locks that afford certain security.

Cylinder Locks for Security

Nearly all front doors nowadays are fitted with Cylinder Locks; the only merit of other types is a slightly lower cost and their use is generally limited to dwellings of the cheaper class. SARGENT Cylinder Locks afford the owner the highest security, the most convenient key, control of his door at all times and the opportunity to enjoy the luxury of a master key that will operate this and all other important locks he uses. It is advisable to apply to the back door and side entrance the same secure type of Cylinder Lock fitted with Knobs and Escutcheons of suitable design.

Inside the House

When the inside of the house is considered the necessity for security is not so apparent; but it is important that the locks used be easy working, long-wearing and of good appearance and that each contains the mechanism which makes it most convenient for its particular uses.

The choice of designs for the interior of the house is of the greatest importance, because of the large part that hardware occupies in the decoration of each room; it is the finishing touch. A pattern that will harmonize with the decorative and architectural scheme is necessary to make the house a complete artistic success.

Period Hardware

When period decorations and furniture are used the hardware must be in the same style. SARGENT Designs of period hardware are true to the source of derivation, always artistic and beautiful in themselves and never extreme or grotesque.

Consult Your Architect

It is safest in selecting hardware trimmings to be guided by the advice of the architect. He knows better than anyone else what patterns will best carry

out and complete his design for the building and a satisfactory result is assured if his advice is followed. In cases where an architect has not been engaged this book gives the owner an opportunity to make a selection that will appeal to his own taste and judgment and please the members of his family.

Good Hardware Not Extravagant

To equip a house from cellar to attic with dependable hardware may seem costly. But consider right-quality hardware as a permanent investment and one of the few materials entering into the construction against which there is no maintenance charge and the expense is small; good hardware is not extravagant, the whole amount being a very small item in the total cost of the building.

Order Early

An early selection of hardware is always advisable and necessary if proper and suitable trimmings are to be obtained. In the first place it is well to know the cost of the hardware when the building operation starts, so that a sufficient amount can be reserved for the purchase of suitable goods, and in the next place, it is necessary to place the order with the hardware dealer early so that he can secure from the factory the goods he does not carry in stock necessary to complete the order and assure the delivery of the goods when wanted.

The Illustrations

BECAUSE of their importance, we illustrate and describe in this book Cylinder Lock Sets for front doors and also print the description of Lock Sets for interior doors, which are similar in pattern to the Front Door Sets, but smaller, the sizes being suitable for the smaller and lighter doors used inside the house. We also furnish SARGENT Hardware similar in design for sliding doors, closet doors, pantry doors and communicating doors: the principal difference being in the functions and operation of the locks.

Bathroom Doors

For bathroom doors, on the bathroom side, we recommend the plain patterns, finished in nickel or white enamel to match the plumbing, or made of our "Eclipse" Metal, a kind of white bronze, which is particularly desirable and easily kept clean and bright. These plain patterns are also suitable for kitchen use. Iron trimmings should not be used in bathroom or kitchen as the moisture will cause them to rust.

French Windows, Casements, Etc.

French windows, casement windows, swinging windows, double-hung windows, transoms and all parts of the house can be fitted with SARGENT Hardware that performs in the best manner the services which are required. These goods are all shown in the Sargent Catalogue, a large encyclopedia-like volume, that may be consulted at any hardware store.

Colonial Patterns

For Colonial houses we illustrate in this book a number of designs. We make also Cut Glass Knobs, Door Knockers, Door Latches and other reproductions of the hardware of former days, which will be of particular interest to those whose buildings are to be of the Colonial style.

Wrought Hardware

CAST BRONZE or Brass Hardware is preferable and the designs shown on the preceding pages should always be chosen if the amount reserved for hardware will allow their use, but for houses of low cost our wrought designs illustrated on the following pages are particularly suitable. With the many patterns there is no reason why a low-priced cottage should not be tastily trimmed with artistic and suitable hardware at a small advance upon the cost of the poor stuff so often used.

This wrought hardware is substantial, being made from metals of heavy gauge, the patterns are good and the die work is executed with great care. They are all fitted to SARGENT Easy Spring Locks.

Selection of Locks

IN the selection of locks the appearance is not the only thing to be considered, as a good looking case may cover poor materials and imperfect mechanism. The inner working parts are important as the action and life of the lock depend on them.

When you see  on the case it is a guarantee of proper materials, careful workmanship, easy working and long wear.

All the locks used in the sets in this book contain the Sargent Easy Spring feature; all are guaranteed to stand the wear and tear of daily use and to do good work.

For front doors lock No. 6845—the best example of the pin-tumbler lock principle—provides the maximum of lock security. Every precaution against operation from outside by intruders and every protective feature are included; every device for convenient and easy operation by the owner and his family is contained in the lock.

Sargent Cylinder Locks may be examined and the technical details of mechan-

ism and operation will be explained in all hardware stores where Sargent Locks and Hardware are sold.

The above cut-a-way illustration represents the interior of the cylinder and shows how the pin-tumblers must be brought into line to operate the lock; this can only be done by the right key, thus insuring the exclusion of those who should be kept out of the house.

The different trade numbers used for the inside sets indicate variations in size of case, size of face, style of keys, weight, etc. We have selected the lock best suited, in grade and price, for each design; but if higher priced locks are wanted where cheaper locks are listed they may be substituted at additional cost. If necessary to make a saving the lower priced locks may be used with designs for which we have listed those of higher grade. We would advise, however, that you allow our experience to guide you by adopting the lock sets just as we have printed them.
